DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Dov Rosenfeld on September 27, 2004.

The application has been amended as follows:

In line 1 of claims 1 and 12, the phrase "(an "approximation sequence)" has been deleted.

Claims 23 and 24 have been cancelled.

Allowable Subject Matter

- 2. Claims 1-22 are allowed.
- 3. The following is an examiner's statement of reasons for allowance: Stothers et al. teach an adaptive control system. The prior art of record does not teach the method comprising the steps of: (a) determining a first set having candidate partial sequence as members, each member comprising a plurality of elements; (b) selecting the first n elements of one of the members of the first set as the next n output elements for said approximation sequence, n being a positive integer; (c) forming a second set having descendent candidate partial sequences as members from said first set; (d) applying a fitness filtering process to said second set to rank its members according to fitness for

representing at least a corresponding portion of the series of input samples; (e) selecting at least some of the members of the second set to form a third set; and repeating steps (a) to (e) so as to produce said approximation sequence, wherein the third set of step (e) functions as the first set of the subsequent step (a).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Stothers et al. teach an adaptive control system. Pastor et al. teach a method of frequency filtering applied to noise suppression in signals implementing a Wiener filter. Zhou teaches a method and system to detect unwanted noise. Bizjak teaches noise extractor system and method.

Contact Information

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Edward Raymond whose telephone number is 571-272-2221. The examiner can normally be reached on Monday through alternating Friday between 8:00 AM and 5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Marc Hoff can be reached on 571-272-2216. The fax phone numbers for
